

**It's in  
our nature**

**CONVER**

# Driven by innovation

For more than fifty years we have been building and developing machines that are ground-breaking in every sense. It has always been our goal to produce machines with which we can effectively manage nature in a responsible way, both on the water and on land. This means maintaining the infrastructure that is essential to protect ourselves from flooding to ensure effective drainage and safety alongside roads. With the knowledge we have acquired over the years, we, more than anybody else, are in a position to supply customised solutions. We also go that extra mile. We relied on our creativity and technical expertise to build the C4. This tool carrier is developed in close cooperation with her users. The C4 is a product of our passion for innovation, and that is in our nature too.

# Driven by passion

Conver's machines are built by a dedicated team. These are professionals who are passionate about their work. This can be said of the people in the technical office, the people in the factory and our people in the sales force. You can see the love that goes into building our machines in everything we do, whether it is the choice of materials, the choice of parts or in the high standard of finish. You can see our 50 years of experience in everything we do. Many of our innovations are the result of extensive collaboration with operators. We have translated their experiences and wishes into the ideal operator's cab. The operator's cab has plenty of room and the seat and controls can be adjusted to multiple positions. The machines are simple to operate and maintain. Heat and noise are kept away from the operator through the application of surface cooling and insulation of the power source. They are built by passionate professionals for passionate professionals.

**CONVER**

# Driven by perfection

A machine consists of many thousands of parts, and only when everything is working as it should can we talk about perfection. It is the total sum of factors that leads to that major difference, and you can expect just that level of perfection from a Conver machine. Conver is not just better in one area, Conver is better in every area. We have thought through every detail, which means you can count on a machine that is totally reliable. You can also expect this same level of reliability from our tools and our trailers. All individual components collectively represent a comprehensive solution, where every part meets the same high standards. Perfection does not only ensure that a machine performs to its full extent and without fault in all conditions. Our designers have also kept in mind that maintenance is required. The beating heart of the machines - the engine - can be accessed easily, which means the required service can be carried out in as short a time as possible. And thanks to the modular construction of our machines, it is always possible to replace a part. We are driven by perfection, because you deserve the best.

# Driven by technology

Your staff are driven by infrastructure management and maintenance. These are people who closely adhere to regulations, laws and recommendations from economists, biologists, politicians and nature conservation agencies. Our staff are driven by technology. They have opted for a whisper-quiet engine as this is easy on the ear and environment. They have developed an auger that can deliver maximum power at all times and in any place. They have sought out a paint that is the least harmful to the environment, but that also gives maximum protection to the best quality steel available in the world. We have developed a system for our winches whereby the winch cable can be easily retracted without the operator needing to actually monitor it. Each day we benefit from the range of technology in the boats that ensures that each operator is always able to enjoy carrying out their work. In fact, we are just like the people who work with our machines, in the sense that we enjoy the opportunities that technology offers us.

# Driven by quality

It is always our goal to surpass the expectations of our customers and consumers. We have learnt to achieve this by constantly developing and innovating, which means you can now count on an exceptionally reliable machine that will serve you throughout a long and problem-free working life. In addition, you are assured of low maintenance costs thanks to the ingenious construction and selection of the very best components. You can also see the quality in the high level of finish on both the exterior and interior of the machines. Thanks to our many years of international experience we are also well-placed to build machines that fully satisfy every requirement set by legislation. And you can rest assured that every operator will feel at home in a cab that has everything they need - a place they look forward to working in every day. However, in order to know exactly what we mean, you need to experience our machines for yourself. Visit our factory or make an appointment to find out more about any of our machines. You are always welcome, as that too is in our nature.

Conver BV, Industrieweg 18, 4283 GZ Giessen, The Netherlands - T: +31 (0)183 447272 - F: +31 (0)183 447270 - [www.conver.com](http://www.conver.com)  
Along with Herder, Precision Makers, Roberine and Votex, Conver is a part of the Dutch Power Company.
