High Performance for Maximum Productivity

The R 966 crawler excavator is characterised by its maximum productivity. Whether be it in earthmoving or quarry applications, this 70 tonne class excavator has an optimised hydraulic system matched together with intelligent operating modes. This ensures the capability for operating on large construction sites and in a quarry.

Reliable Working Capacity

The Liebherr V8 engine on the R 966 is very productive thanks to its high torque even at low speeds. The digging and breakout forces of 69,240 lbf and 79,580 lb respectively ensure fast and efficient working cycles. Equipped with a Liebherr bucket and tooth system it guarantees easy penetration into material for simple extraction. The R 966 stability and fluid movements of the machine ensure smooth and fast loading of dump trucks.

Optimisation of Hydraulic System for Constant Power

With an independent 3rd pump dedicated for swing the R 966 has optimal power. This provides maximum torque while swinging and the remaining two pumps still have full power for other excavator functions.

The Versatility of the Wide Range of Attachments

Thanks to the wide variety of attachments, optimised kinematics, the R 966 impresses with its versatility in all applications.

Liebherr Engine

- New Tier 4 Final engine with SCR exhaust gas after-treatment system
- Designed specifically for construction applications
- Liebherr Common-Rail injection system for optimised output
- Automatic fuel-saving idling system

Choice of Work Mode

- E Mode – Economy: for economical and ecologically-friendly operation. Minor restriction of power without affecting the load lifting and excavating capacities
- P Mode – Power: for high excavation capacities and difficult applications. Pump flow and power are not limited
- S Mode – Sensitivity: for precision jobs and loading of materials
- P+ Mode – Full Power: especially designed for increased power; only recommended for extreme applications

Floating Boom Function

- Increased hydraulic flow for the other cylinders (stick and / or bucket for example)
- More power available, making it easier to extract materials and reduce work cycle times
- Increased service life when a hydraulic hammer is used

Economy

Profitability – Efficiency and Reduced Operating Costs

Low Operating Costs

Thanks to its high technology and its innovation, the Liebherr France Company increases the performance of its machines while reducing their fuel consumption. Examples of this are the new diesel engine, automatic idling, electronic engine speed sensing control, Regeneration Plus function and the hydrostatic cooling system (fans operate only when necessary). Consequently, the reduced fuel consumption means less pollution.

LiDAT Fleet and Machine Park Management Tool

To improve your machine management, Liebherr has developed its own data transmission system using the GPRS network. This system allows you to instantly know the position of your excavator via a web interface. Thanks to data transmission, the LiDAT system developed and manufactured by Liebherr keeps you informed about fuel consumption, number of service hours or machine faults, just to name a few. LiDAT allows you to be proactive and more responsive: organizing and maintaining your fleet for increased productivity.

A Durable and Tried-and-Tested Design

In demanding applications Liebherr represents the benchmark for the robustness of its machines and the quality of the Liebherr components. Several casted parts are used for the design of the machine and are a testimony to the expertise and know-how of the manufacturer. With the large-sized attachments the R 966 crawler excavator is ideal for tough applications.

A Tried-and-Tested Production Process and Advanced Technology

Liebherr development process integrates advanced digital tools in the fields of finite element computation, fatigue calculation and other simulation software. The results are then validated on special test benches prior to carrying out endurance tests on the entire machine in extreme conditions.

High-Performance and Durable Undercarriage

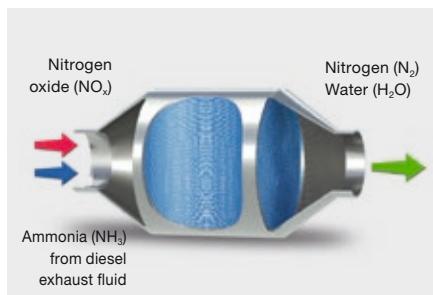

Liebherr offers a large and unique range of welded or bolted undercarriages. The chamfered track pads have optimal manoeuvrability and are more resistant to wear on rocky terrain. The Liebherr travel drive is more powerful and better protected. The supporting rollers with double bearings guarantee improved load distribution and thus better durability over time.

Specific Solutions Tailored to Customer Requirements

In the case a customer has a special request to address a specific application the customized solutions are designed and manufactured by Liebherr. This ensures successful integration and optimal performance of the excavator for the customer. As a sign of reliability Liebherr provides a manufacturer's warranty for the entire excavator including specific components as well as the electronics.

In longitudinal position of undercarriage

Max. reach * Limited by hydr. capacity

The load values are quoted in tons (t)/lb x 1,000 at stick end (without bucket), and may be swung 360° on firm and even ground. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 750 mm/30" wide track pads. Indicated loads are based on ISO 10567 standard and do not exceed 75% of tipping or 87% of hydraulic capacity (indicated via *). Without bucket cylinder, link and lever the lift capacities will increase by 1,150 kg/2,540 lb. Lifting capacity of the excavator is limited by machine stability and hydraulic capacity.

Height

Can be slewed through 360°

Max. reach * Limited by hydr. capacity

The load values are quoted in tons (t) / lb x 1,000 at stick end (without bucket), and may be swung 360° on firm and even ground. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 750 mm / 30" wide track pads. Indicated loads are based on ISO 10567 standard and do not exceed 75 % of tipping or 87 % of hydraulic capacity (indicated via *). Without bucket cylinder, link and lever the lift capacities will increase by 1,150 kg / 2,540 lb. Lifting capacity of the excavator is limited by machine stability and hydraulic capacity.

The load values are quoted in tons (t)/lb x 1,000 at stick end (without bucket), and may be swung 360° on firm and even ground. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 750 mm/30" wide track pads. Indicated loads are based on ISO 10567 standard and do not exceed 75 % of tipping or 87 % of hydraulic capacity (indicated via *). Without bucket cylinder, link and lever the lift capacities will increase by 1,150 kg/2,540 lb. Lifting capacity of the excavator is limited by machine stability and hydraulic capacity.

The load values are quoted in tons (t)/lb x 1,000 at stick end (without bucket), and may be swung 360° on firm and even ground. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 750 mm/30" wide track pads. Indicated loads are based on ISO 10567 standard and do not exceed 75 % of tipping or 87 % of hydraulic capacity (indicated via *). Without bucket cylinder, link and lever the lift capacities will increase by 1,150 kg/2,540 lb. Lifting capacity of the excavator is limited by machine stability and hydraulic capacity.

Height

Can be slewed through 360°

In longitudinal position of undercarriage

Max. reach

* Limited by hydr. capacity

The load values are quoted in tons (t)/lb x 1,000 at stick end (without bucket), and may be swung 360° on firm and even ground. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 750 mm/30" wide track pads. Indicated loads are based on ISO 10567 standard and do not exceed 75 % of tipping or 87 % of hydraulic capacity (indicated via *). Without bucket cylinder, link and lever the lift capacities will increase by 1,150 kg/2,540 lb. Lifting capacity of the excavator is limited by machine stability and hydraulic capacity.

Height Can be slewed through 360° In longitudinal position of undercarriage Max. reach * Limited by hydr. capacity

The load values are quoted in tons (t) / lb x 1,000 at stick end (without bucket), and may be swung 360° on firm and even ground. Adjacent values are valid for the undercarriage when in the longitudinal position. Capacities are valid for 750 mm / 30" wide track pads. Indicated loads are based on ISO 10567 standard and do not exceed 75% of tipping or 87% of hydraulic capacity (indicated via *). Without bucket cylinder, link and lever the lift capacities will increase by 1,150 kg / 2,540 lb / 825 kg¹⁾ / 1,820 lb¹⁾. Lifting capacity of the excavator is limited by machine stability and hydraulic capacity.
